

# Technical Bulletin

## R•O•M LED V2 Wiring

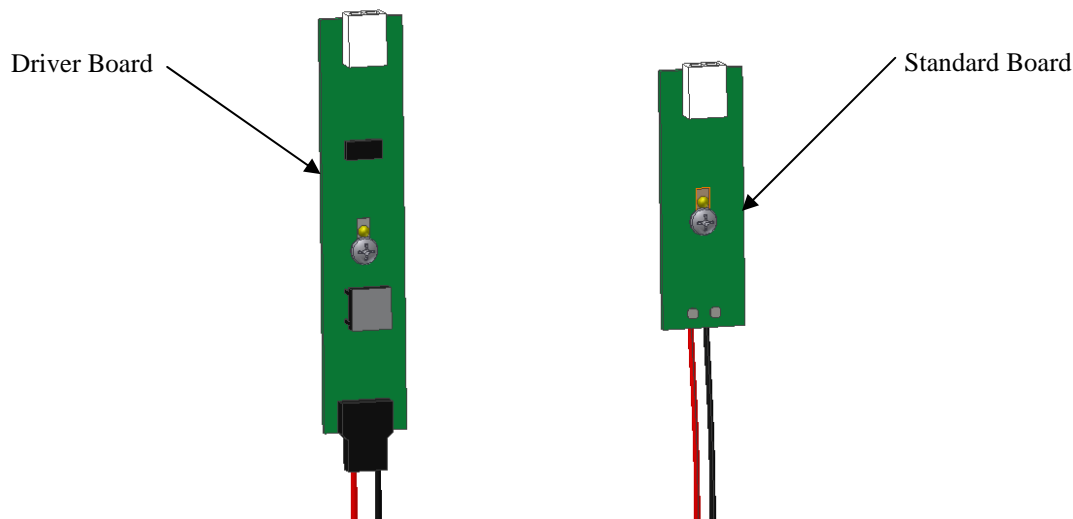

*Our Technical Bulletins are provided to inform you of design options, design improvements, standard sizes and changes, different models, applications, installation, operation and maintenance.*

The new LED V2 lighting by design will ground to the chassis. The positive wiring thru the D.A.S.S. is used as a switching device for the lights. See the wiring diagram for circuit wiring with Door ajar switch. Lighting wired any other way may void the warranty.

### Lights to Power Thru Solid State Switch Configuration Indicator Lights to Ground

**NOTICE:** Power should be wired directly to LED driver board only. Wiring to standard LED boards will damage them and will void the warranty.

**Please provide this information to your engineering, manufacturing, sales and marketing departments, and to your dealers.**
