New Drip Pan Pennant Plates

FM-7.5-215
Rev A
08-17-06

Our Technical Bulletins are provided to inform you of design options, design improvements, standard size and changes, different models, applications, installation, operation, and maintenance. Please provide this information to your engineering, manufacturing, sales and marketing departments, and to your dealers.

R·O·M is pleased to announce the consolidation of our pennant plate inventory. R·O·M Series III Shutters will now come standard with 12 ga pennant plates, eliminating the need to order "heavy duty" pennant plates. The new pennant plate will now accommodate size A, B, C and D roll sizes and for your convenience the mounting holes have not changed. Along with our consolidation of our pennant plate inventory we will also change the way we handle drip pans. In place of the combination pennant plate/drip pan plates you will receive a pennant plate for the shutter and a separate pennant plate for the drip pan, Fig. 1 shows examples of pennant plate for the shutter and drip pans you have received in the past.

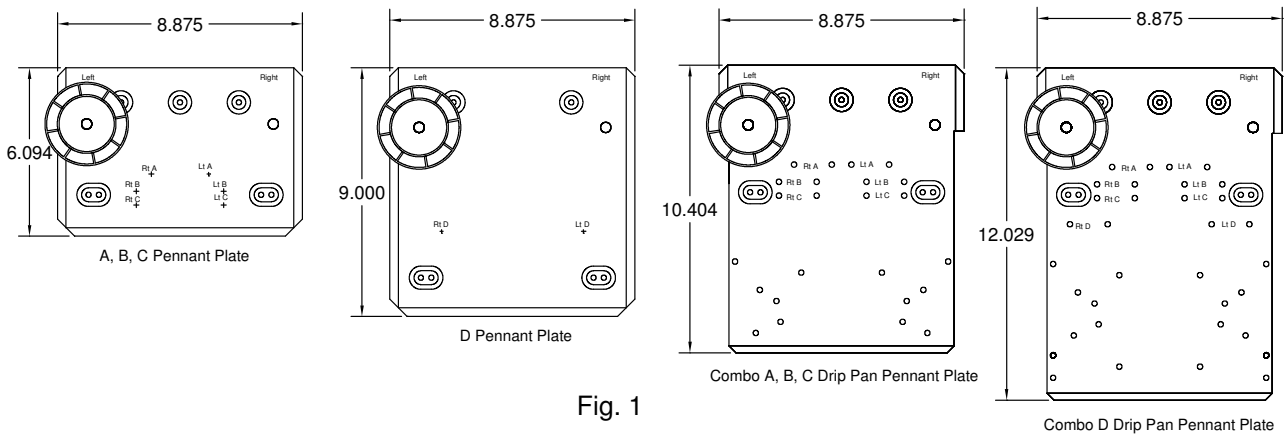

Fig. 1

While Fig. 2 shows the pennant plates you will be receiving on future orders and how they should be mounted in your compartment.
