

Technical Bulletin

R·O·M RoadwarriorTM Ramp Enhancement

Our Technical Bulletins are provided to inform you of design options, design improvements, standard sizes and changes, different models, applications, installation, operation and maintenance.

R·O·M is proud to announce our improved Apron design.

The RoadwarriorTM Ramp was designed & tested to be the safest walk ramp in the food service industry. Features such as a patented reversible walk surface and mechanically fastened design allow component replacement when necessary.

Customers have told us they are keeping equipment longer due to tight budgets in today's tough economic climate. Proper maintenance is necessary to insure heavily used equipment reliability.

R·O·M's new one-piece apron arm increases strength and simplifies apron assembly replacement. This enhancement will become standard spring of 2010 on RoadwarriorTM Ramps.

Manufacturing effectivity 3/29/10
