Our Technical Bulletins are provided to inform you of design options, design improvements, standard sizes and changes, different models, applications, installation, operation and maintenance.

R•O•M is proud to announce our Tall Bottom Rail option for R•O•M Series III Roll-up Shutters. Additional hand clearance is often needed when a compartment's threshold extends out beyond the vertical plane of the curtain's outer surface. This new single piece Bottom Rail profile adds 1 1/2" of additional clearance between the Liftbar and threshold. The same clean R•O•M Series III Bottom Rail look is preserved while providing adequate hand clearance when wearing gloves.

The Tall Bottom Rail option will replace our two piece Bottom Rail with Extension add-on which provided additional 1/2" clearance.

The Tall Bottom Rail reduces the compartment opening height by 1 1/2". Typically this is a non-issue since the bottom of the curtain roll is approximately in the same location.

Please provide this information to your engineering, manufacturing, sales and marketing departments, and to your dealers.
